Translating Documents Without Losing Layout

p1b2 l

A practical guide for operations teams - 2026 edition

p1b3 l

Why it matters

p1b5 j

Large language models have changed how organisations handle multilingual documents. Instead of sending every contract to an agency, teams can now produce a **first-pass translation** in minutes and route only the sensitive sections to human reviewers.

p1b8 j

The hard part is not the translation itself but the *layout*. Invoices, brochures and scientific papers mix columns, tables, captions and footnotes, and readers expect the translated file to look exactly like the original.

p1b4 l

How the pipeline works

p1b6 j

Our pipeline keeps every vector graphic, image and background in place and replaces only the text, so tables keep their borders and shading.

p1b7 j

Text expansion is the main risk: German or French output is often thirty percent longer than English. The renderer first grows each box into free space, then shrinks the font within a safe limit, and finally asks the model for a shorter phrasing when nothing else works.

p1b9 l

Quarterly results by region

Region	Revenue	Growth	Comment
North America	\$4.2M	+12%	Strong demand from healthcare customers
Europe	\$3.1M	+8%	New office opened in Berlin
Asia Pacific	\$2.7M	+21%	Fastest growing market this year
Latin America	\$0.9M	-3%	Currency headwinds offset new deals

p1b30 l

Note: figures are unaudited and rounded to one decimal place.
